

# TMC-PLUNGER TYPE DRAIN VALVES

## **TMC VALVES-Custom designed and fabricated for your process needs.**

The purpose of a Plunger type Drain Valve is to fill the nozzle or stud pad with the plunger or extended body so there is no dead space to fill with product. This can be a great assist in solving plugging or mix ratio issues. The Tretter **Plunger Seal** and **Body Seal** valves provide a high seal quality in a wide range of configurations. Actuation can be manual, air cylinder, electric motor, hydraulic cylinder or air motor. Welded integral heat jackets are also an option.

**TRETTER MANUFACTURING COMPANY**
